

# Air conditioning inspections – do you comply?

Does your building have cooling or air conditioning?  
Is this in excess of 12kW?

Then you may have to comply with the Energy Performance of Buildings Directive (EPBD) and have regular inspections of your air conditioning systems.

For England, Wales and Northern Ireland, this is now a requirement.

For Scotland, it is a requirement for all systems above 250kW. Systems below 250kW but above 12kW will require regular inspections from 4 January 2013.

Your system will also require to comply with new F-Gas Regulations.

**A recent property industry survey found that less than 5% of applicable buildings complied with their EPBD statutory requirements.**

RSP have expertise in these areas and can carry out these inspections to ensure your building complies.

For further details on how RSP can assist in building compliance, please contact:
