

## Courtyard by Marriott® Aberdeen Hotel

RSP were commissioned to take forward Building Services Designs for a new 194-room Courtyard by Marriott® Aberdeen Hotel at Aberdeen Airport. This was one of their first new innovative European design model Courtyard hotels in the UK and opened in 2013.

The Courtyard by Marriott European was a 170-room, six level hotel situated on a 5,835 square meter site, with a flexible design that may be scaled up or down to meet future market or site conditions.

Within the project, RSP introduced low energy LED lighting throughout public areas and bedroom corridors with 3 pipe heat recovery VRF air conditioning within bedrooms, heat recovery in ventilation systems and inverter drivers on all motors, providing an energy efficient solution which was registered with LEED.

Introduced in 1983 and now with over 900 hotels, Courtyard by Marriott is the 11th largest global hotel brand.

RSP have also recently been commissioned to progress a 156 bedroom extension to the hotel including increased front of house public areas, which is scheduled to be completed and open late 2016.
