

Major Financial Institution, Melville Gate Edinburgh

A 3,500m² of data hall for client's use in
Edinburgh which included tenants computer equipment

RSP were asked to rationalize the infrastructure to allow the client to be autonomous from others and remain resilient throughout the refurbishment, as the data halls tenants remained live throughout the work.

To facilitate this RSP separated the infrastructure and hall services while making sure ensure other users were still serviceable.

We have been involved a series of refurbishments and upgrades to this site over the last 12 years and are currently involved in a construction of a further data hall which included the requirement for a fully detailed and co-ordinated BIM model.
