

The University of Edinburgh Central Library and Resource Centre

This project was a five year programme of upgrades to the Grade A listed University of Edinburgh Central Library at George Street. The refurbishment works were carried out on a floor by floor basis. The building remained occupied and fully functional during these works.

The projects includes the full modernisation of library accommodation such as archive areas, break out spaces, resource and learning areas.

The refurbishment included a new colling system via active chilled beams and full power and data installation.

The project is connected to the University's centralised district heating and cooling network.

Sub-metering is provided on a system by system and floor by floor basis.

RSP were also the BREEAM assessors for the project.
