

Wallace High School

RSP provided full M&E services as part of the Public Private Partnership (PPP) programme for Stirling Schools.

This new modern 900 pupils Community High School located close to the Wallace Monument near Stirling contains new teaching facilities as well as pool, games hall and external pitches.

The building was thermally modeled to maximise natural ventilation. RSP provided the Building Services design as well as the 3D coordination to minimise any on-site issues.

The project included sustainable solutions such as rainwater recovery, intelligent lighting controls and natural ventilation.
